

FROM FAST ACTION to STILLNESS:

Photography Lessons from the Southern Ocean

Photographing in Antarctica and South Georgia is exhilarating and challenging. They present location-specific issues – grey snow, high-contrast compositions, unsteady platforms for shooting – as well as the more universal challenge of capturing both fast-moving action and static scenes, and *the need to switch between them quickly and frequently.*

Join Open Sky Expeditions’ Temu Nana as he presents practical solutions – useful in different types of photography from sports to travel to family life – drawn from years of photographing in the Southern Ocean, including:

- How to **set up your camera** to quickly shift between fast-paced and still subjects, between isolated subjects to crowded frames.
- Guidance on **exposure/non-exposure camera settings** for shooting in polar and marine environments
- How to handle challenging conditions like **grey snow** and **high-contrast compositions** (bright whites and dark shadows)

THURSDAY, APRIL 23 @ 8:00pm ET
